Portfolio: dan-portfolio-ten-phi.vercel.app

SUMMARY

Master of Computer Applications (MCA) student focused on cybersecurity, ranked in the top 2% on TryHackMe. Continuously develops practical skills through security labs, CTF challenges, and competitions. Builds, tests, secures, and deploys applications. Driven by curiosity and a commitment to continuous learning.

EDUCATION

Kristu Jayanti University – Bengaluru, Karnataka 2025 – 2027

Master of Computer Applications

Martin Luther Christian University – Shillong, Meghalaya 2022 – 2025

Bachelor of Computer Applications

EXPERIENCE

Cybersecurity Intern – CynuxEra May 2026 – July 2026

CloudSentinel: AWS Cloud Security Simulation and Monitoring

- Contributed to a local AWS security lab using LocalStack and Docker Compose to simulate IAM, S3, and CloudTrail services without a live AWS account.
- Worked with simulated IAM anomalies, unauthorized access events, and S3 misconfigurations to examine cloud security monitoring workflows.
- Collaborated on a React-based dashboard for reviewing simulated security alerts, event logs, and cloud resource findings.

PROJECTS

TechRadar – Web Reconnaissance Scanner GitHub

JavaScript, Node.js, Express.js, Axios, Cheerio, Puppeteer

- Built a web reconnaissance tool combining technology fingerprinting, DNS enumeration, TCP port scanning, TLS certificate inspection, and HTTP security-header checks.
- Implemented concurrent scan tasks with `Promise.allSettled` and streamed progress and results through Server-Sent Events (SSE), with per-task error handling.
- Identified web frameworks, servers, and content management systems from HTTP headers, cookies, HTML metadata, and script patterns; checked seven security headers.

Zombie Network Simulation – Malware Propagation Sandbox GitHub

React, TypeScript, Cytoscape.js, Zustand, Recharts, Web Workers

- Developed an educational simulation of worm, trojan, ransomware, and botnet propagation across five network topologies, with interactive patching, firewall, and quarantine controls.
- Moved simulation computation into a Web Worker and visualized network states, infection rates, and event logs using Cytoscape.js and Recharts.

Wazuh SOC Lab

Wazuh, Security Information and Event Management (SIEM)

- Developing a Wazuh-based Security Operations Center (SOC) lab to practice security monitoring and alert investigation.
- Preparing lab write-ups for presentation as a functional website, combining security documentation with web development and deployment.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C/C++, SQL, HTML/CSS

Security: OSINT, DNS enumeration, TCP port scanning, HTTP security headers, OWASP Top 10

Security Tools: Wireshark, Metasploit, Nmap, Burp Suite, Wazuh; SIEM fundamentals

Cloud and Systems: AWS (IAM, S3, CloudTrail), LocalStack, Docker, Linux

Development: React, Next.js, Git, GitHub, REST APIs

CERTIFICATIONS

CompTIA Security+ (2026)

Google Cybersecurity Professional Certificate (2026)

EC-Council Ethical Hacking Essentials (2026)

Cisco CCST Cybersecurity (2025)

TCM Security: Security Fundamentals (2025)

TCM Security: Linux 100: Fundamentals (2025)
